

Headset Amplifier for Polycom® Sound Station

Performance: The BP-MA1 is intended to be used as a means of attaching a communications headset to a Polycom® Sound Station and provide controllable amplification for the headset earspeaker. The front panel includes an *on/off* switch for power, a red LED to indicate that power is applied, a 4-pin male XLR jack to accept the plug from a standard communications headset, and a volume control. The rear panel has an input for connection of the (provided) AC adapter, a 3.5mm jack for connecting to Sound Station's headset output jack, and an RCA jack for connection to the Sound Station's microphone input jack. Connecting cables are supplied.

Durability: The BP-MA1 is built in our familiar extruded aluminum case with Celcon®M90 end bezels. It is equal in resistance to breakage as our BP-1 beltpack, with one exception. The rotary control for headphone level does protrude outside the protection of the bezel. With a little caution for this, the BP-MA1 can be tossed around much like the BP-1. The main PC board is supported by internal slots on the sides and by the rear panel. Every other internal component has been designed and supported for maximum resistance to shock.

Value: The BP-MA1 shares not only the case and bezels from our BP-1 intercom beltpack but many internal parts, controls and connectors. This allows us to manufacture the unit efficiently, in relatively small quantities, and to offer surprisingly modest pricing.

Compatibility: The BP-MA1 is compatible with the Polycom® Sound Station. Connection is intuitive since all connectors will only fit in the appropriate jacks.

Specifications:(Subject to change without notice)

Size: 3.70 x 4.30 x 2.50 in.

Power requirement: 18~30VDC, 10mA quiescent

93.98 x 109.22 x 63.5 mm.

30 mA max, with both lamps lit.

Weight: 13.5 oz 0.383 Kg.

Headphone output: 8~4KW acceptable, 100W ideal
