Crane Communications System

Applications Notes

In this system, the LS-3T at the base of the crane constantly monitors the crane operator. Response, when necessary, is made using the press-to-talk button. In very noisy situations, a headset can be plugged into the LS-3T, automatically muting the loudspeaker and eliminating the need to press-to-talk. The PS-3 Battery Adaptor connects to the crane's 24V electrical system, and provides the power for the system (restricting current draw to 1A) as well as the necessary termination circuitry for the system.
