

Wherever there's a show...

Hybrid TV Studio System

Applications Notes

This system is intended to illustrate how cameras from the three groups described on the previous pages may be interfaced with a Production Intercom studio system. Two substantially different CCU's are unlikely to exist together in a real system. The SB-1 Splitter/Isolator is a passive device used to minimize cable runs. The AD913 permits users on the cabled system to communicate with standard simplex walkie-talkies.
